AARP is fighting to expand access to affordable and reliable high-speed internet—often called broadband. AARP recently surveyed South Dakota registered voters age 50-plus about how they use the internet and whether they support expansion of high-speed internet, especially to rural areas currently lacking it. AARP also commissioned an analysis to study the potential gains from increased broadband deployment and adoption in South Dakota.

May-June 2019 Survey. AARP Research. 1,000 interviews with age 50+ adults who are registered to vote in South Dakota (including 600 people who reside in rural areas). Interviews conducted May 16 through June 4, 2019.

*“Reaping the Benefits: Potential Gains from Increased Broadband Deployment and Adoption in South Dakota,” an analysis for AARP.

**BIPARTISAN SUPPORT FOR HIGH-SPEED INTERNET EXPANSION**
